+44 (0)7780 029408 | montyburr@hotmail.co.uk | [linkedin.com/in/montyburr](https://www.linkedin.com/in/montyburr)

Third-year Computer Science student specialising in cyber security, with a First-Class academic record and hands-on industry experience across secure programming, database design and enterprise IT operations. Developed an interest in how technology can be used to predict, prevent, and defend against digital threats through coursework, independent projects and internships, and now seeking a graduate role in Cyber Security or Security Engineering.

Education

Newcastle University – BSc Computer Science (Cyber Security)

September 2024 – July 2027 (Expected)

First Year Result: First Class (Average: 83.3%) | **Second Year Result:** First Class (Average: 80.4%)

Key modules: Security programming (97%); Computer Systems Design & Architectures (92%); Foundations of Data Science (78%); Software Systems Design and Implementation (82%); Software Engineering Team Project (75%); Programming Portfolio (90%).

- Built a secure Flask web application implementing user authentication, input validation, and CSRF/XSS protection through threat-modelled design (Security Programming)
- Delivered a full-stack interactive inequality metrics platform as part of a 7-person Agile team, featuring a world map with selectable metrics, and a quiz engine tailored to user interaction (Software Engineering Team Project)
- Built a solid foundation in Python and Java, algorithm design and complexity analysis, and database design using SQL and MongoDB, applied across coursework including a Java-based meal planning application
- Coordinated a multi-developer codebase using Git feature branches, pull request reviews, and merge conflict resolution across a 7-person team

Marlborough College – *September 2019 – July 2024*

- A levels: Computer Science(A), Maths(A), Economics(B); EPQ Level 3: Cyber Warfare(A*)
- 11 GCSEs: A* - A

Work Experience

AJW Group, West Sussex

Digital Internship: June – September 2026

- Rotated across five teams (Digital Security, Service Desk, AI & Digital Engineering, Data & Analytics, Business Applications), gaining end-to-end exposure to enterprise IT operations
- Designed and built two AI-powered internal tools: one to help the service desk triage, categorise, and resolve support tickets, and another to automate project intake from initial idea through to Jira ticket, technical specification, and working prototype
- Ran a company-wide phishing simulation, supported risk assessments on new software applications, and was involved in SOC dashboard development and policy/procedure updates

Digital Work Experience: June – July 2023

- Shadowed cyber security professionals, learning about threat detection, system monitoring, and access control measures
- Gained exposure to Help Desk Support, Data Management, Cyber Security, and Web Development teams, communicating with both technical and non-technical staff

Arundel Marquees, West Sussex: *June – August 2025*

- Set up and dismantled marquees and event structures for private and corporate events, working to tight deadlines in a fast-paced team environment

Technical Skills

- **Languages:** Python, Java, SQL, JavaScript, HTML/CSS
- **Security:** Phishing simulation, security awareness training, risk assessment, threat modelling, secure authentication, input validation, CSRF/XSS mitigation, SIEM concepts, SOC dashboards, security policy documentation
- **Data & Cloud:** Power BI, dbt, Streamlit, AWS (S3), pandas
- **Databases:** SQLite, MariaDB, MongoDB
- **Tools:** Git, GitHub, Jira, PyCharm, IntelliJ, VS Code, DBeaver, MongoDB Compass, Flask

Interests

- Cyber Defence, Cyber Warfare, and Critical Infrastructure Protection
- Active member of Newcastle Medics RFC and passionate about nutrition and fitness
